

PAMP:Source Code

From OpenSource

The source-code can be pulled directly from SourceForge (<http://sourceforge.net/projects/pamp>) .

If you pull *PAMP* you will get all components along with build-files that build the whole shebang in one go. Apart from some UI stuff, the components can also be pulled separately. In case of any problems building the software, please use our forum (<http://discussion.forum.nokia.com/forum/forumdisplay.php?f=129>) .

Contents

- 1 Trunk or Release
 - 1.1 release
- 2 PAMP
- 3 PAMP Components
 - 3.1 MySQL
 - 3.2 httpd
 - 3.3 PHP
 - 3.4 mod_python
 - 3.5 libpng
 - 3.6 libxml2
 - 3.7 libxslt
 - 3.8 jpeg
 - 3.9 curl

Trunk or Release

You can pull directly from the trunk or then a specific release. Unless you intend to participate in the actual Pamp development, you probably should choose the latter alternative. The trunk contains the latest source, but may occasionally be broken in one or more respects.

release

Further down is shown for each specific component how to check out the trunk. To check out a specific release, you must first check what releases there are and then check out a specific one. In the following is shown how to do that for MySQL; the other components are handled analogously.

```
> svn list http://pamp.svn.sourceforge.net/svnroot/pamp/mysql/tags
mysql-5.0.45_1.0.0/
mysql-5.0.45_1.0.1/
```
